

Final Project: Project Spec

I plan on making a portfolio site for my final project. The purpose of this site is to provide a link on my resume, for potential employers to get a view of my work.

My target demographic will be corporations looking to hire a Mid-level Print/Web Graphic Designer, and the job descriptions only require some knowledge of CSS, HTML, Javascript, etc...

The pages will mostly focus on my print design work, I would like to have simple navigation, and continue with my minimalist approach as I see it is very effective in portfolio websites for designers.

This is an example I believe to be effective.
